Abalto

News
Contact Us

The scope of services are designed to facilitate project execution not just from the inception and development stages, but to support EPC commissioning and start up phase, operator mobilization and continue on to extended commercial operations of the facility.

Abalto are able to offer engineering service encompassing one or more of the following which can either be negotiated as packages or provided as demanded by your requirements.

- Preparation of initial design schemes
- Technical Specification
- Preparation of Feasibility with Concept Design
- Construction and site management
- Detailed Design and Engineering
- Build, Integration and Testing
- Site Commissioning
- Site Support

Each service is structured to be coordinated with the related phases of the process including development, design, construction, testing, and operations. The complete package of our services includes all of the necessary elements that are important to both the owner/operator and the EPC groups for successful project planning and execution.
