

Procurement

We source and procure internationally

Abalto procurement service is initiated during detailed engineering where enquires are floated internationally to reliable reputed suppliers to ensure a competitive bidding process that minimise exposure to project profitability from

procurement uncertainty. Procurement management is aligned to specific project requirements and include QC inspections inline with project quality plan and ITP, expediting, logistics management and import/export authorisation.

We assign international third party inspectors and have our test engineers witness staged inspections ensuring subcontractor compliance minimising rework. After factory acceptance testing the packing and preservation is witnessed to ensure materials leaving vendor works are compliant. Logistics management and site preservation helps minimise transit damage and contamination which could have negative impact on project schedule.
